

Preserving Curly Horse Types: COOK

COOK- unknown Coat Gene from a line of Cook family horses out of Copper D (Tony Palomino QH x Damele Mare). Art Cook was a neighbor of the Damele's, all his Curly horses were out of Copper D. We do not know if Copper D carried KRT25 and the Cook gene, but it could be??

Houdini is line bred Copper D and Cook horses. We know he passed the Cook gene onto offspring.

Offspring of Houdini:

Patrick

Kara Mia

Magjic Rainmaker

Ne Hi Majic (Cook gene only)

Copper Majic

Gemstar Majic (Passed Cook gene on)

Knickerbocker Majic

Colorado Sunshine

Kodiak Majic (Cook gene only)

Houdini's Honey

Okie "J" Sasha Houdini

Lacy Lady

CPS Woody

HCR Cinderella (KRT25 +/- but could also carry Cook gene)

Offspring of Houdini known to carry the Cook Gene without other Curly coat genes:

Cook Gene

Kodiak Majic* ABC 2660

Color: Chestnut
Sex: Stallion
Date of Birth: 1995

Preserving the Cook gene- Breeding choices

Possibly the best way to breed a Cook coat gene horse is to a Smooth Coat Curly (Damele/Cook line) that complements the horse in conformation and temperament. Another choice is breeding to straight coated other breed that complement the conformation and temperament of the Cook line horse. (Morgan, QH, Arabian, etc) This way a breeder will know they are not introducing other Curly Coat genes and can concentrate on the Cook gene being passed on. This is a very unique gene and worth persevering. At this time we do not know how many horses may carry the Cook Coat gene because we do not have a test for it. By testing Cook lineage horses for Curly Coat genes, we may find more that only carry the Cook gene. Research is continuing.
